1	15/02/2023	Initial drafting of the analysis report.

---

## Introduction

---

This report may be the shortest out of the four that have to be made for this project, as there is only one non-report requirement, that is also quite short.

This report is an essential tool for tracking our progress and ensuring that we remain committed to achieving success as a team. By regularly reviewing and updating this document, we can evaluate our progress adjust our approach as needed.

## Contents

Considering most of the problems I found at first with the environment were fixed during the group requirements, I only needed to focus on solving the requirement that I was asked to do.

The requirement statement is:

Modify the anonymous menu so that it shows an option that takes the browser to the home page of your favourite web site. The title must read as follows: “<id-number>: <surname>, <name>”, where “<id-number>” denotes your DNI, NIE, or passport number, “<surname>” denotes your surname/s, and “<name>” denotes your name/s.

This statement is clear and I had no trouble understanding what I was asked to do, henceforth I did not need to contact a lecturer.

## Conclusions

The fact that this individual was easily done can be attributed to the previous experience in this framework, the simplicity of the first task out of many to come and the work done during the group requirements, that resulted in the proper functioning of the platform and its related components, allowing me to fully dive into the requirement.

In conclusion, this deliverable has allowed me to set up correctly the required components, fully understand the framework we will use for the remaining course and start working on it, giving me a very stable starting point for the project.

# Bibliography

Intentionally blank.
